

10kV Relay Protection Number

Overview

86T is a Lockout Relay for a Transformer. Suffixes for numbers are also suggested. In North America protective relays are generally referred to by standard device numbers. ANSI IEEE Standard Device Numbers are below: (the more commonly used ones are in bold) 86T is a Lockout Relay for a. These numbers are based on a system that is adopted by a standard for automatic switchgear by Institute of Electrical and Electronics Engineers (IEEE), and incorporated in American Standard C37. The functions are supplemented by letters where amplification of the function is required. Even in those parts of the world where IEC standards are predominate, the use of ANSI numbering. In the design of electrical power systems, the ANSI Standard Device Numbers denote what features a protective device supports (such as a relay or circuit breaker).

ANSI (IEEE) Protective Device Numbering

Protective relays are commonly referred to by standard device numbers. For example, a time overcurrent relay is designated a 51 device, while an instantaneous overcurrent is a 50 device.

Intro to Relays #2

Protective Relays are an advanced area of electrical engineering and contracting that can be intimidating, but they don't have to be! This series of 3 articles will introduce basic relaying to the

ANSI/IEEE Relay Protection Codes Guide

This document lists standard device numbers for protective relays used in North America according to ANSI/IEEE Standard C37.2-2008. The numbers are used to refer to different types of relays, with the

ANSI device numbers

In electric power systems and industrial automation, ANSI Device Numbers can be used to identify equipment and devices in a system such as relays, circuit breakers, or instruments. The device
