

# Application of 850nm Optical Modules

## Overview

An 850nm SFP is a short-reach optical transceiver designed for high-speed data transmission over multimode fiber, commonly used in enterprise networks and data centers. It is best known for its low cost, high compatibility, and reliable performance in short-distance applications. Why Choose the 850nm Wavelength?

Industry Standard: IEEE 802.3 standards such as 10GBASE-SR. 850 nm Fiber Optic Transmitters, Receivers, Transceivers are available at Mouser Electronics.

Classification of Multimode 850nm Series Optical Modules • Classified by Package Type

The mainstream packages for multimode 850nm products in the current market are SFP (Single-Fiber Bidirectional, single transmit and single receive mechanism) and QSFP (multi-transmit and multi-receive). Optomarine's 850nm optical module for communication links is excellent for long-distance transmission and is the best solution to prevent malfunctions due to noise in industrial sites. It can be used most.

The CM85-2MF-3C-Tx-L is a compact 2. With a reach of up to 2km and compliance with IEEE C37.94, this SFP LC module is perfect for efficient data transmission in demanding networking environments, particularly. Against this backdrop, the 800GBASE-SR8 OSFP PAM4 850nm 50m optical module has garnered significant attention for its outstanding performance and versatile applications. The 800GBASE-SR8 is an 800G optical module based on the QSFP-DD (Quad Small Form-factor Pluggable Double Density) form factor.
