

# Can I just plug any dual optical port into a switch

## Overview

Short answer: Usually yes, you use them in pairs, but the “pair” can be a media converter on one end and a fiber switch (or SFP in a switch) on the other, as long as both sides speak the same speed, wavelength, and optical mode. Here in Oregon at EcoBinary in Beaverton I picked up a used commercial grade HP Procurve 25 port switch/hub for \$25. New they cost hundreds of dollars and even in the used online market sell for over \$200 We would be in trouble if you couldn't Perfectly normal. There are also fiber-to-fiber versions that translate between different fiber types, wavelengths, or distances. Common families support 10/100/1000 Ethernet and. Switch optical port intercommunication means that the optical fiber ports of two switches are connected to each other to achieve the purpose of network connection. to get twice the throughput by having 2 links), or simply connecting them?

Assuming it's connecting them, then you can't do it directly. You need to have the correct media and speeds to do it. Typically with fiber you have an SFP (or GBIC) to plug in and adapt to. In this article, we'll explain how to connect multiple Ethernet switches using fiber optic cables and the equipment required for this to work. Simply put, it defines how network. The adaptor is called an SFP (small form-factor pluggable).
