

# Communication optical modules are sold so cheaply

## Overview

Average selling prices for 100G optical modules have declined approximately 70% over the past five years, forcing chip vendors to achieve aggressive cost reductions while maintaining performance. The Optical Modules Market encompasses the design, manufacturing, and deployment of compact, high-performance devices that facilitate the transmission and reception of optical signals over fiber optic networks. These modules serve as critical interfaces between optical fibers and electronic. Coherent optical modules are no longer a niche for only the longest undersea links — modern pluggable coherent and DCO form-factors are reshaping economics across metro DCI and long-haul DWDM. This analysis explains why coherent transceivers deliver superior spectral efficiency and longer reach. The global optical modules market was valued at \$14.8 billion in 2025 and is projected to reach \$39.5 billion during the forecast period from 2026 to 2034.
