

Connecting a multimode fiber optic transceiver to a router

Overview

Insert a compatible SFP transceiver into the converter's port, making sure it matches the network's media type and speed. Then, connect one end of the fiber cable to the transceiver and the other to the appropriate port on a switch, router, or another media converter. Start by confirming the correct fiber type—single-mode or multimode—since mixing them will lead to transmission errors. Connect the media. This quick yet practical demonstration dives into the installation, configuration, and traffic monitoring of SFP optical and twisted-pair transceivers. Using an HP 24-port switch and a MikroTik router, the video showcases how to connect devices via multimode LC connectors and effe., 1G, 10G. This is highly cost-effective way to connect two SFP/SFP+ devices (for example two units of CCR1036-8G-2S+) for very short distances, within racks and across adjacent racks. 5m SFP+ 10Gbps Active Optics direct attach cable.
