

Convert the switch s network cable port to a fiber optic port

Overview

Insert a compatible SFP transceiver into the converter's port, making sure it matches the network's media type and speed. Then, connect one end of the fiber cable to the transceiver and the other to the appropriate port on a switch, router, or another media converter. Some switches don't accommodate fiber. (I really don't like fiber to ethernet converters either) It does not look like you are making any long runs of any sort of consequence, so then. Make sure the following ports are available on the converter: Fiber-optic ports (TX/RX) for sending and receiving signals. Ethernet (RJ45) port for the copper Ethernet connection. Power input (if not using PoE). Fiber optic technology is widely used in networking due to its high-speed data transmission capabilities and long-distance coverage. Increased speed and stability: By. In this article, we'll explain how to connect multiple Ethernet switches using fiber optic cables and the equipment required for this to work.
