

Electrical cable tray CTE

Overview

CT-E-type cable trays have integrated extension part and for jointing bolt sets RS 5 (bolt M6x12 and nut M6) or quick locks CT-QL (for trays H=60mm) can be used. Both create a sufficient electrical conductivity, which eliminates the need to install a separate grounding. EAE Cable Tray System product E-Line CT is being manufactured as a hot dipped product that is used in heavy or medium duty application with its perforated design. CT-E-type trays are typically used in office- and commercial buildings, schools, hospitals and shopping centres, but also in warehouses, parking halls and industrial buildings. The selection of material and finish is a function of the environment in which they are used in a wide range of applications without notice. All illustrations, descriptions and technical information included in this document are provided as indications and can cable trays are equivalent.
