

# FTTR connected to switch has no network

## Overview

There are three possibilities after checking the PC's IP address: PC has no Internet access. PC has Internet with a public IP. Please double check your network topology, the switch needs to be connected behind. We have a fibre run, SM, 650 meters, with Level1 dumb switches at each end, I get Link lights at both ends, but there's no network traffic. 1 x Main FTTR can supports maximum 16 Sub FTTR. ATB (ATB2120-T-1-SA) + Transparent fiber (10m/20m/30m/100m). Here we will list some common factors in this article. Check LED lights. The switch is authorised, assigned to fortilink interface (port2) and visible/online on the FortiGate (40f OS6. Demands for high bandwidth, high bit rates in both directions, low latency, and service reliability are constantly growing. Applications such as online learning, remote work, online gaming, video conferencing, live. Designing a robust FTTR network involves crucial decisions, such as choosing between Point-to-Point and Passive Optical Network architectures, each with distinct cost and performance implications.
