

Fake optical cables

Overview

Some bogus “copper” cables are really made of copper-plated aluminum instead; or “gold” connectors turn out to be gold flashing that quickly wears off. Either way, your cable will not function properly. Beyond that, there's the issue of safety. Many phony cables skimp on. Counterfeit cables are fake or low-quality imitations of standard cables that lack proper safety certifications and often use inferior materials like: These cables are often cheaper but pose significant risks to performance and safety. The subject of counterfeit and non-compliant. Fake goods are part of a huge industry, with unscrupulous internet retailers making it easier to peddle counterfeited items to unsuspecting consumers. According to statistics available online, pirated goods comprise approximately 3. It was advertised and badged as a Cisco item (rather than a much cheaper unbranded clone), so no chance of any. When you see CATx and fiber cable priced significantly low, put up a red flag. The cable is probably counterfeit or very cheaply made, even if it sports a brand name, UL® number, or ETL logo. Agencies and associations, including UL® and the CCA (Communications Cable & Connectivity Association). Are you using a genuine Faber optical cable or a counterfeit one?

In this video, we'll show you how to identify a fake Faber optical cable and what to look o.
