

Fire safety standards for IDC Internet Data Center construction

Overview

NFPA 75, officially titled "Standard for the Fire Protection of Information Technology Equipment," serves as the cornerstone for designing, installing, and maintaining fire prevention and protection systems within these vital facilities. Recent changes in the technical requirements of the standards for data center fire protection will ultimately result in stronger code requirements and potentially more rigorous enforcement over data center construction and operation by local authorities having jurisdiction (AHJs). This UL white. Why it matters: In mission-critical rooms, seconds of smoke become hours of downtime. Its adoption and rigorous adherence are absolutely paramount. Therefore, a wide range of applied skills in fire engineering is required to develop a fire safety design for these data centres.
