

# Fpt optical splitter

## Overview

JPT Fiber Optic Splitter, available in rack-mount, box, and plug-in designs, deliver low loss, high uniformity, and stable performance. A fiber-optic splitter, also known as a beam splitter, is based on a quartz substrate of an integrated waveguide optical power distribution device, similar to a coaxial cable transmission system. The optical network system uses an optical signal coupled to the branch distribution. Its primary role is in Passive Optical Networks (PON), which are the foundation of. Explore our comprehensive selection of high-performance fiber optic splitters. Ideal for FTTx and PON applications, our optical splitters ensure reliable, low-loss signal. We offer a full line of fiber optic couplers and splitters supporting SM, MM, PM, large core, and double-clad fibers across 300–2000 nm, with power handling up to 100 W and operating temperatures up to 300°C. Three fabrication methods are employed: fusion, micro-optics, and planar lightwave circuit. In this guide, you'll learn how fiber splitters function in PON networks, the difference between PLC and FBT types, and how to choose the best model for your rollout in 2025.
