

# High-density data center cold aisle high-precision stock available

## Overview

High-density modular data center featuring cold aisle containment, 1100kg static payload, and custom logo labeling for efficient and scalable IT infrastructure. Essentially creating a room within the aisle, the system helps keep hot and cold air separated to make existing air conditioning systems in data center and edge-of-network. The data center containment market size was estimated at USD 2.38 billion in 2024 and is projected to reach USD 6. This creates a highly efficient "chimney effect". Aisle containment top roof ceilings, walls and end of row doors are designed to help maintain optimal operating temperature in server rooms and data centers in order to lower data center energy demands and save on energy costs. AZE offers a wide range of partial and total containment solutions that.
