

How to access the background of Huawei optical modules

Overview

Run the following command to view interface information: `display interface <interface-type> <interface-number>` The output includes interface rate, module type, link status (the state being UP is a prerequisite for normal operation) and traffic statistics, which can be used for. Run the following command to view interface information: `display interface <interface-type> <interface-number>` The output includes interface rate, module type, link status (the state being UP is a prerequisite for normal operation) and traffic statistics, which can be used for. If an optical module on an interface is faulty, you can run the display commands to view information about the optical module. Identify a Huawei-Certified Optical Module Run the display `transceiver [interfaceinterface-typeinterface-number | slotslot-id] [verbose]` command to view information. The following uses the Moduletek SFP-10G-LR module connected to a Huawei S6700 switch as an example to introduce how to read information of the connected optical module on a Huawei switch.
