

How to set the IP address for a remote intelligent PDU

Overview

For greater control and stability, consider assigning a static IP address to your PDU. Access the PDU's configuration interface through a web browser or command-line tool. An IP controlled PDU redefines power management by enabling remote monitoring and control of energy distribution. These intelligent power strips empower you to optimize energy usage, balance loads, and prevent overloads in real-time. Facilities using such solutions have reported up to a 20%. Refer to other local practices or building codes as applicable for the correct methods, tools, and materials to be used in performing procedures not specifically described in this document. The products covered by this instruction manual are manufactured and/or sold by Vertiv. Before you can use the web interface to monitor the PDU power status, you must use the PDU Configuration Utility to set up the. There are two ways to connect new PDUs to a network: using an individual IP address for each PDU, connecting directly to a network switch, or connecting through Conteg Spain's redundant network cascading architecture.
