

IDC Micro-module

Overview

This system is a micro-module data center, integrating server rack systems, enclosed aisle systems, precision air conditioning, UPS power distribution systems, environmental monitoring systems, security systems, and more. Delta's micro-modular data center was selected by China telecom clients as one of nine major internet data centers (IDCs) in a Chinese province in its plan to rapidly establish energy-saving and environment-friendly IDCs. With a fully modular architecture, it can be flexibly configured according to. The iPDU-MC series rack iPDU is designed to suit the operational requirements of next-generation datacenters., which can realize dual-row closed/open hot and cold channels for multiple deployments, and the power of a single cabinet can reach up. Most recently, manufacturers have introduced the “intelligent micro module,” which fuses the Internet of Things and digital and information technology.
