

# Is the distribution box indoors or outdoors

## Overview

A distribution box, also known as a distribution panel or board, is a cabinet that holds electrical parts used to supply power to multiple circuits within a system. It acts as the central point where electricity distribution is managed inside a building. Indoor units are suited for controlled spaces with low moisture and particulates, often rated IP20-IP40, while outdoor enclosures require IP65-IP68 or NEMA 3R/4/4X ratings to resist rain, dust, and. Understand the key differences between distribution boards and boxes—functions, applications, safety, cost, and when to use each one. Understanding these differences is essential for selecting the right one for your environment. As a minimum, they concentrate electricity to different circuits for steady delivery, controlling possible overloads or short circuits on all. Bottom Line Up Front: Your home's distribution box (electrical panel) is typically located in the basement, garage, utility room, or mounted outside near your electrical meter.
