GYTC8S fiber optic cable is armored stranded loose tube steel wire strength self supporting Outdoor figure 8 cable, single-mode/multi mode fibers are positioned in the loose tubes, which are made of high modulus plastic, while the loose tubes strand together around metallic central strength member. Self-supporting aerial optical cable (GYXTC8Y marking shall be printed newly on a different position. The both cable ends are sealed with heat shrinkable end caps to prevent water ingress. Characterized by its unique "Figure 8" profile, this cable incorporates a steel stranded wire as its self-supporting component, offering unparalleled tensile strength during both. Optical fibres are housed in loose tubes that are made of high-modulus plastic and filled with water blocking yarns. The tubes (and fillers) are stranded around the central strength member to form a cable core. Stranded steel. In the modern era of telecommunications, 12 cores figure 8 fiber optical cable play a pivotal role in ensuring seamless connectivity across various devices and networks.
