

# Materials for the small busbar on the top of the high-voltage switchgear

## Overview

Busbars are constructed from conductive metal bars, typically made of copper or aluminum, with a large cross-sectional area and insulated by specialized materials. This paper reviews the latest busbar design methodologies and offers design recommendations for both laminated and PCB-based busbars. Silicon Carbide (SiC) power devices switch at much. As an engineering service provider, M. Key. In this case, bus bar configuration might be low in profile, thereby changing the orientation of the bus structure and the airflow. The selection of tabs or terminations may determine conductor thickness if there's. This article provides a comprehensive overview of busbars, covering their construction, function, classification, selection, and applications in high-voltage power systems. In cooperation with the customer, these can also feature TE's Bus Bar Insulation Tubing (BBIT). Busbars provide a safe HV connection on shorter distances.
