

No signal at the line access switch

Overview

Check for link lights: The status of the link light should be solid green if the link is up. If the link is not up or the LED is not solid green then, Check if the cable used is of is correct type such as cat5,cat6. Try using a known working cable between the devices. If you have physical access to the switch, it can save time to look at the port LEDs which give you the link status or can indicate an error condition (if red or orange). But don't let that throw you off, when you are troubleshooting you must exhaust all possibilities. Each computer has an IP address and they should. This article will list a few simple steps about how to do a check on the switch when the switch has no Internet access and try to solve the problem. All PaloAlto Hardware-based Firewalls. To verify an Aggregated Ethernet Interface (LAG) or an IRB interface (called VLAN interface in legacy platforms), refer to KB22217 - Resolution Guides - EX -.
