

Norway s longest optical fiber cable

Overview

The Svalbard Connection consists of two parallel fibre-optic cables running along the ocean floor, spanning approximately 1,400 km, which is roughly the distance between Oslo and Paris. The two optical fiber cable consist of two segments, from Harstad to Breivika in Andøy Municipality, and from Breivika to Hotellneset near Longyearbyen in Svalbard. It connects the Svalbard community in Longyearbyen, and the world's northernmost ground satellite station, Svalsat, to the mainland through stable and efficient. High-capacity fibre cables are required to move vast quantities of data over large distances. Where Norway previously only had a few such undersea cables providing connections to the European mainland, the country now boasts an extensive network providing direct links between Norwegian coastal. The tear enabled seawater to come into contact with a copper layer carrying electrical current in one of the two cables that together make up the Svalbard fiber. The location was unique on Earth: every satellite in low Earth orbit above 500 km passes within range on every single orbit. No other ground station can make that claim. SvalSat was. An Internet exchange point (IX or IXP) is the physical infrastructure through which Internet service providers (ISPs) and content delivery networks (CDNs) exchange regional Internet traffic between their respective networks. In addition to the connectivity offered by national and international.

Connectivity — Norsk Datasenter Industri

From each of the subsea cable landing sites, new terrestrial backhubs have been constructed to provide sufficient capacities and route diversity between PoPs in

Norway's submarine cable network provides world-class

A recent flourishing of submarine fibre optic cables, however, has provided Norway with direct, secure and fast links to the main data hubs on the

Far North Fiber

Far North Fiber, also called Far North Fiber Express Route, is a proposed 14,000 km long submarine fiber-optic cable connecting Japan and Europe by traversing the Northwest Passage.

The longest underwater fibre optic cable in the world:

2Africa is one of the most ambitious projects in the field of connectivity over the past ten years. It involves laying 45,000km of underwater fibre optic cable to link

Undersea cable | Definition, Submarine Cable, Fiber Optics ...

An undersea cable is a fiber-optic cable laid across the ocean floor that transmits information and enables worldwide communications.

Fibre broadband | Space Norway

The Svalbard Connection consists of two parallel fibre-optic cables running along the ocean floor, spanning approximately 1,400 km, which is roughly the distance between Oslo and Paris.

Norway Enters Phase II of Fiber Optic Infrastructure

Nor5ke Fiber AS has recently announced its entry into the second phase of the fiber optic infrastructure construction plan in Norway. The company

Top 29 Fiber Optic Cable Manufacturers in Norway (2026) | ensun

The Fiber Optic Cable industry in Norway presents several key considerations for potential investors and companies interested in the sector. One important factor is the regulatory framework, which is

World's longest fiber-optic cable may land on North Coast

The world's longest fiber-optic telecommunications cable, which would link the mainland U.S. directly to Southeast Asia, could be headed for Eureka's front porch. Asia Times recently

Arelion Opens Additional Norway Fiber Route to

Arelion (formerly Telia Carrier) announced the completion of its latest backbone route expansion in Norway. The additional fiber route brings a new level of resilience,

Svalbard: How Norway Laid the World's Northernmost Cable Through

The Svalbard Undersea Cable System runs 1,375 km through the Greenland Sea at depths up to 2,700 meters. Laid in just 25 days during the only ice-free window, it was mysteriously

Space Norway launches "Arctic Way": the world's

Space Norway is set to establish new high-speed connection from the Norwegian mainland to Jan Mayen and Svalbard. Space Norway has signed a

Fiber Map of the World 2026

Submarine and terrestrial fiber optic cables form the backbone of modern global communication, carrying data across continents at incredible speeds. These networks enable internet access,

Nexans Norway Wins Arctic Fibre Cable Contract

Space Norway has awarded Nexans Norway AS with a contract to produce an advanced subsea fibre-optic cable for the Arctic Way network, the world's northernmost subsea fibre-optic

Tampnet chooses Nexans for their New Diverse Subsea

Tampnet partners with Nexans and Cecon Contracting to build a significant subsea fibre optic cable system, staying ahead of growing market

Fibre connectivity | Space Norway

The Svalbard fibre network provides critical connectivity to the remote Arctic Archipelago of Svalbard. This subsea fibre optic infrastructure delivers high

This is what the damaged Svalbard cable looked like

Experts consulted by NRK suggest that it is likely a trawl dragged the cable, causing damage to the outer layer, the armoring, and the inner tube where

New subsea cable planned, connecting Norway,

IOEMA is a state-of-the-art, high-capacity, 1400 km repeatered submarine fibre optic project that will arc across five key northern European

Longest submarine fibre-optic cable

Light forms the basis for all communications in the modern world, with many thousands of kilometers of fibre-optic cables to be found at the bottom of the world's oceans. The longest of all these light pipes

Subsea fibre cables

Explore how subsea fibre cables cables operated by Space Norway ensure stable high-speed internet access for the community of Svalbard.

Longest telephone cable

The worlds longest submarine telephone cable is FLAG (Fibre-optic Link Around the Globe), which runs for 27,000 km 16,800 miles from Japan to the United Kingdom. It links three continents (Europe,

Norwegian Government Approves Arctic Way Subsea Cable Linking

The Norwegian government has decided in cabinet to ask the Storting for authorization to enter into an agreement with Space Norway AS to establish a new submarine fiber connection to

Norway''s longest under water cable laid out from Bodø to Røst

Posted By: Joseph Tatone 29. July 2016 A new fiber optic underwater cable from Bodø to Røst will ensure Lofoten better internet connectivity. – That means they become less susceptible to
