

One fiber optic cable connects two independent routers

Overview

yes, for single-mode modules, you'll need single mode fiber/cable. Assuming you don't have experience with manufacturing the proper cable, the number of strands don't count into it, really. The goal is NOT to extend the network, but make two independent networks for two families. I'm planning to use a TP-Link MC220L transceiver to convert the optical signal to ethernet. Check the specs, that the advertised wavelengths and desired distance/length match. Can I Connect Two. I'm struggling with scenario where I need split single WAN connection (6 public addresses available (/29)) between 2 separate networks. 08-08-2018 02:55 PM It depends. Is your default gateway. One solution is to run your own "ISP" and redistribute the connection - that is not uncommon, but not what was asked) I am assuming a very small setup so that is why I have made the suggestion.
