

# Optical Cable and Module Selection

## Overview

Understand how to choose fiber optic cable by comparing single-mode vs. multimode, network speed and distance needs, cable jackets/fire ratings, connectors, cost and future-proofing for data and telecom networks. Single-mode Fiber (SMF): suitable for long-distance transmission, typical specifications for OS2, can support from 10km. It is crucial to carefully choose your optical fiber cable to ensure optimal performance on your network. Do not leave it to chance, as each selection step plays an essential role in the quality and reliability of your optical fiber infrastructure. This guide breaks. SFP optical modules are the unsung heroes of fiber networking—the essential interface that converts electrical signals from network equipment into optical signals for transmission over fiber optic cable, and vice-versa.
