Commands to monitor PoE status. These keywords are available only on stacking-capable switches. An approximate number can be obtained by dividing the power of the PoE power module by the average power of PDs. Show interface status: This command will provide information about the status of each interface, including whether PoE is enabled. To check the Power over Ethernet (PoE) status on a Cisco switch, you can use several commands in the command-line interface (CLI). PoE Switch Management Interface Log into the PoE switch's management interface: Many. If your Cisco switch PoE is not working, the most common causes are an exhausted PoE power budget, a disabled inline power configuration, physical cable faults, incompatible powered devices (PD), or a crashed PoE controller.
