

# Replacing the electrical panel without modifying the wiring

## Overview

Explanation: Upgrading an electrical panel usually does NOT require rewiring the entire house. As long as the existing branch-circuit wiring is in good condition and meets current safety standards, you can replace a 100A or 150A panel with a new 200A panel without touching the. Luckily, in many cases, you can upgrade your panel without touching the wiring inside your walls. Let's break down when that's possible, why it's sometimes necessary, and how to know what your home really needs. Many New Jersey homeowners want to upgrade their electrical panel to support modern power demands, but the idea of tearing through walls to update wiring can feel. Upgrading an electrical panel is often necessary for homeowners seeking greater power capacity or improved circuit protection. This upgrade creates a dilemma when existing branch wiring, such as cloth-wrapped, ungrounded two-wire, or older armored cable (BX), remains in place. In Orange County, where many homeowners are installing EV chargers, smart home technology, and high-powered appliances, electrical capacity has become a growing concern. According to Southern California Edison.
