

Safety passage distance from primary distribution box

Overview

Distance Requirements: Maintain a minimum clearance of 1.0 meter from all accessible faces of a switchboard. Is distance satisfactory to protect power distribution boxes (breaker boxes, disconnects ranging from anywhere from 50 volts to 440 volts) from damage in active warehouses with stacked material, fork truck traffic, and pedestrian traffic; or does there need to be a protective barrier?

If distance. Distance Requirements: Maintain a minimum clearance of 1.0 meters of unimpeded space around switchboards with doors open or switchgear fully racked-out. Electrical clearances set the minimum safe distances for panels, overhead lines, pools, and buried wiring — and ignoring them has real consequences. The guidelines also cover the safety aspects of GTC completing works onsite and specify your responsibilities in the delivery of the. Distribution box and switch box should not exceed 30 meters.
