

Setting parameters for the smart gateway of the power distribution cabinet

Overview

Set power configuration parameters based on site requirements, such as the Device Name, Cabinet height, Power system, Number of power supplies, and Rated cabinet power. The settings in the following table are used as examples to describe the basic configuration. Set based. The power management method varies according to the ECC version. Obtain the ECC800 Data Center Controller User Manual of the version that matches the ECC800 version in use. Before installation and use, check whether the gateway flag is consistent with the working conditions used. Correctly connect the power supply line, and. The Federal Communications Commission (FCC) regulates interstate and international communications by radio, television, wire, satellite, and cable in all 50 states, the District of Columbia and U. To ensure that this product maximizes the benefits to users, it is recommended that the high-power equipment be connected as smart loads (heat pumps, pool heaters, clothes dryers, immersion heaters, etc. This PDU must not be operated one behind the other!
