

# Sound Card Bridge

## Overview

A lightweight Windows audio router that streams audio from one sound card's input to another's output using WASAPI, supporting both Shared and Exclusive modes with minimal latency. Download the latest release from the Releases page. Each device simulates an audio adapter (usually named a "card") whose output is internally connected to the. The WinRADIo Digital Bridge™ Virtual Sound Card is a software option designed to transfer digitized audio signal streams exclusively from a WinRADIo receiver to other applications. It does so by creating a Windows multimedia driver with a pair of Wave In/Out Windows devices. The WinRADIo receiver. The USB Audio Bridge allows you to send and receive 48 kHz, 16-bit PCM audio between a computer and Q-SYS using a UAC-compliant (driverless) USB connection. You can configure the USB Audio Bridge to behave as: This enables the Q-SYS device to act as an endpoint for web conferencing and music. The Limetree BRIDGE II is a high-quality network adapter—also known as an audio renderer—that streams music from streaming services and local storage in studio master quality, digitally transmitting it to existing D/A converters or other devices with digital inputs. It is an excellent choice for beginners.
