

Standards for Conduit Laying in Distribution Boxes

Overview

That's where electrical conduit systems come in. In the UK, you need to comply with two key standards to make sure your electrical system is safe, reliable and built to last: BS EN 61386 and BS 7671. All construction work shall be done in a thorough and workmanlike manner in accordance with regulations that are more stringent. By mastering these standards, you ensure that every enclosure is correctly sized, securely supported, and capable of protecting the conductors within from physical damage. The IEC 61386-1:2017 standard provides general requirements for conduit systems used in cable management. It outlines the technical specifications and performance criteria for conduit systems, including their materials, design, and durability to ensure proper protection of electrical cables.
