

The distribution box cannot be cleaned of dust

Overview

The distribution box contains many electronic components, such as relays, circuit breakers, etc. These components are very sensitive and are easily eroded by impurities such as dust and dirt, which will affect the normal operation of the equipment and even cause serious. The purpose of this guidance is to provide best practice solutions for preventing dust from entering and depositing in electrical enclosures so that the cleaning of these enclosures may be eliminated or significantly reduced. Identifying the common electrical enclosure types that may accumulate. Our Air Cleaning Blowers present an innovative solution that not only effectively eliminates dust but also provides added benefits for a more efficient and productive environment. Therefore, the electrical distribution box or distribution cabinet needs to be dust-proof to ensure the normal operation and long life of. In order to ensure the waterproof performance of distribution boxes, manufacturers will strictly seal the joints of the box. Usually, rubber sealing rings or sealants are used for sealing to effectively prevent the intrusion of rainwater, sand and dust. Those of us in engineering know that once dust gets into the box, it can cause anything from poor contact to complete shutdown. To achieve truly leak-proof dust protection.
