

The wires inside the cable tray are hidden

Overview

Due to their exposure to the open air because of the cable trays, the wires contained within need a very durable outer covering. The regulations dictate that the cables must either be Type TC (also known as Tray Rated) or must be metal-armored (Type MC). These regulations ensure that the metal or plastic frames that contain the wires are robust enough to ensure. Caretta Workspace's design conceals cables and wires in cable trays and passageways that are hidden throughout the desk and connected to an integrated, 6 or 12 position surge suppressing power strip. All of your equipment integrates into your desk, with just one power cable coming out. It also focuses on construction and installation practices for cable trays. Here is the summary of the main points found in NEC Article. Let's explore some clever solutions to hide your cables and keep your setup tidy. Cable trays and raceways are simple yet effective tools for organizing and hiding cables. A cable tray system forms a structural framework. After determining the routing of the cabling, a network cabling project initially needs to consider the laying of cable trays, which can be made of metal, conduit, or plastic (PVC) tubes based on the material used.
