

# Tonga overhead fiber optic cable undergrounding

## Overview

A volcanic eruption in the South Pacific Ocean in January 2022 caused a tsunami and damaged an undersea fiber-optic telecommunication cable that connects Tonga, a Polynesian archipelago, to the rest of the world. It is 827 kilometres (514 mi) long and was activated in 2013. It has cable landing points at Sopo, a suburb of Nuku'alofa in Tonga, and Suva, Fiji. The Tonga-Fiji Submarine Cable System (also known as Tonga Cable) is a 827km fiber optic submarine cable system linking Nuku'alofa, Tonga and Suva, Fiji, and connects to the Southern Cross Cable Network at the Suva Cable Landing Station in Fiji. Not a metro area, not a data center cluster — a sovereign nation of roughly 105,000 people, spread across an archipelago of more than 150 islands in the South Pacific, whose international connectivity depends on a.
