

What router is stable when connected to a 50M fiber optic connection

Overview

Our top overall pick is the Netgear Nighthawk RS700S, a Wi-Fi 7 router built for multi-gig fiber plans that handles up to 200 devices across 3,500 square feet. For budget-conscious households, the TP-Link Archer AX55 delivers reliable Wi-Fi 6 performance without the premium price. A fiber-optic connection is the best choice for fast home internet as it has a number of advantages compared to traditional copper cables, such as faster speeds and less interference. Many major ISPs, such as Verizon and Xfinity, offer fiber connections directly to your door, known as FttP or Fiber. The best router for fiber internet is one that matches your plan speed, home size, and how you use your connection. However, the market is flooded with countless options, making the selection quite overwhelming. To simplify. Fiber often uses an ONT plus a high-performance router or gateway, not a traditional modem. Picking the right hardware, or replacing ISP equipment, can drastically improve speed, latency, and reliability.
