

What type of pigtail does the terminal box use

Overview

Grounding pigtails are the most common variety. These are short green or bare copper wires with a ring terminal or fork terminal on one end, designed to connect to the grounding screw on outlets and switches. They are required by the National Electrical Code (NEC) in many wiring. A pigtail in electrical wiring is a short wire used to connect multiple wires to a single point or device. It ensures a secure connection by combining wires with a wire connector, like a twist-on connector or a wire nut, and then linking them to the intended terminal or fixture. Turn the power back on and double-check that everything is working. Common fiber pigtail types include LC, SC, ST, and FC, available in single-mode (OS2) and multimode (OM3/OM4).
