

# Why does the core switch restart

## Overview

Although the switch software is highly reliable, a switch in the stack can experience a software issue that results in the crash and reboot of that switch. This crash can happen in the software running on the CPU in the management CPU or on the software running on the. so im wondering is it possible to find out the reason of a switch reboot or not, and if so how?

Post the complete output to the following commands: 1. dir 08-06-2016 11:25 PM  
08-06-2016 11:48 PM Possible power outage. As of last night, core1 was up for two years, four months, and core2 has been up for seven years, five months. I worry about loop port or other issues related to the ports. Periodically rebooting these critical devices is essential for maintaining optimal performance, applying configuration changes, and resolving certain software-related issues. 09-23-2019 03:51 PM. We have a pair of Dell N3224P-ON switches and today's morning my colleague gave me a task and instructions to remove some unused VLANs. When I saved the configuration, everything stopped working and now we don't know what to do.
